1. What you need

Legal disclaimer. DigitalVodka prepares this paper for Company Assets v105.0.30 as accurately as it reasonably can at the time of this release. Google, Microsoft, Okta, and other third-party screens change without notice. Copy live values from the program. This paper is not a warranty that a third-party console still matches, not an obligation to update third-party steps between releases, and not legal, tax, ERISA, HIPAA, PCI, accounting, or compliance advice. Demo names are fictional sample data. THE SOFTWARE AND THESE PAPERS ARE PROVIDED AS IS. End User License Agreement Version 7, including the liability waiver, governs. Support: www.digitalvodka.com only.

64-bit Linux (x86_64 or aarch64). Python 3. GTK and WebKitGTK for the Company Assets window. About 4 GB RAM and 200 MB disk. Internet is optional (SSO and mailbox only).

Do not open CompanyAssets.html in Chrome, Firefox, or any browser. That file is not the program. The program is its own window.

2. Install

- ☐ **1. Download the zip.**
CompanyAssets_v105.0.30-Linux.zip from Downloads.

- ☐ **2. Unzip the whole folder.**
Keep Install-Company-Assets.sh, Run-Company-Assets.sh, Uninstall-Company-Assets.sh, and the files/ folder together. Open a terminal in that folder.

- ☐ **3. Install WebKit if this PC does not have it.**
Debian / Ubuntu / Mint: `sudo apt install python3-gi gir1.2-webkit-6.0 gir1.2-gtk-4.0` (or: `sudo apt install python3-gi gir1.2-webkit2-4.1 gir1.2-gtk-3.0`). Fedora: `sudo dnf install python3-gobject webkitgtk6.0 glib4`.

- ☐ **4. Run the installer.**
bash Install-Company-Assets.sh

- ☐ **5. Pick the company list folder.**
Suggested default is Documents/CompanyAssets. A network mount or an existing Company Assets folder is allowed. Do not put the list inside ~/.local/share/CompanyAssets (that is the program, not the list).

- ☐ **6. Share key if the folder already has a list.**
32 characters, eight groups of four. Leave blank for a new list. The program can also ask on first open.

- ☐ **7. Find the launcher.**
Install copies the program to ~/.local/share/CompanyAssets and puts one launcher in ~/.local/bin, the Applications menu, and the Desktop (CA shield).

3. First open

- ☐ **1. Open Company Assets.**
Applications menu or the Desktop icon. Not Chrome. Not Firefox.

- ☐ **2. Agree to the license.**
End User License Agreement Version 7. Scroll to the last paragraph. Tick the liability waiver. Click **I Agree**.

- ☐ **3. Choose where the list goes.**
On **Where should the company list go?** click **Use default** or **Browse**.

- ☐ **4. Practice if you need it.**
User ID **Demo** / password **12345**. Demo cannot change that password. Do not share Demo as the office list.

- ☐ **5. Activate on the first PC only.**
Settings, Status, **Activate Company Assets**. Write the share key down. Linux keeps that key in this computer's keyring, not in the shared folder.

4. Try without installing

From the unzipped folder: **bash Run-Company-Assets.sh**. Same window. Same EULA. Same Demo login.

5. A second Linux PC

Run Install on that PC. On first open click **Browse** and pick the same Documents/CompanyAssets (or network) folder. Type the **activation key** and the **share key**. Click **Connect**. Sign in as the User ID created on the first PC. Print the Multi-user setup guide for the full list.

6. Uninstall

From the unzip, or from ~/.local/share/CompanyAssets: **bash Uninstall-Company-Assets.sh**. Uninstall never deletes Documents/CompanyAssets.

7. If the window cannot open

Install the WebKit packages in step 2, then open Company Assets again. If Python 3 is missing: install python3, then run Install again.

Exports, Help PDFs, and CSV files land in Documents/CompanyAssets/exports. The list is encrypted (CADB4). Support is www.digitalvodka.com only.
